

KRHS Students Successful at TSA Competition

The New Jersey Technology Association (TSA) held their annual competition at the College of New Jersey. Seventeen hundred students competed in thirty-three different events. Kittatinny sent twenty-one students to represent the Cougars in eight categories. Here are a few competition topics examples:

- Computer Coding
- Extemporaneous speech
- Prepared Presentation
- Technology Problem Solving

Emily Durso and Tessa Durso took first place for Architectural Design. This year's challenge focused on "tiny houses." The students had to create a set of architectural plans, keep in mind Leadership in Energy and Environmental Design (LEED) and create a computer generated model. As the winners of this competition, they are entitled to represent the state of New Jersey at the National Conference in Tennessee.

Jean-Paul Rincon, Paul Collins, Dan Moffett, Thomas Mountford, Payson Oelkers, Nathaniel Hontz, and Zach Martin (not pictured) won first place in the Scientific and Technical Visualization category. This topic challenges participants to create a graphical representation of complex scientific concepts. The Cougar team created a primer on vaccinations. This team will be invited to represent the state of New Jersey at the National Conference in Florida.

Thank you to the KRHS TSA Club, Mr. D. Carnegie and Mr. S. Wykoff. Your industrious work ethic got you two first place trophies and the honor to represent our state in the national competition. Best of luck!
