

SCIENCE

KRHS hosted a workshop on the Next Generation Science Standards. Led by Jeannette Joyce of Rutgers Graduate School of Education, local and KRHS science teachers learned about the new science curriculums handed down from the federal and state governments. Also in attendance was Michael Heinz, the New Jersey State Science Supervisor from the New Jersey Department of Education to answer educators' questions.

Kimberly Harrington, the acting Commissioner of Education was present. Ms. Harrington and Mr. Heinz took a tour of KRHS to meet the students and see what they are currently discovering in the classroom. Ms. Harrington was very impressed during her visit.

The KRHS Department of Science Administrator, Mr. Gene McNicholas has been working with the educators to create a curriculum at the local level to support the new federal and state mandates. He arranged this day to share information with everyone.
