

## The Art of Pottery

Madelyn Haug a sophomore at Kittatinny is learning the various techniques required to make pottery from Mrs. Anderson. While she was working on her latest piece, she allowed me to watch as a lump of clay was turned into a small vase.

Just clay, water, potter's wheel, and your bare hands.

Amazing, right?! Yet it still needs to be fired, glazed, and fired again. It takes time, love, and patience to create something so unique. In the end, Maddie will have a one of a kind piece that she created with her own two hands.
